

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

- I will have to say it was the preview part, for that was the only part that I was able to abstract and encapsulate. I won't really say it was easy, but a bit challenging.

2. What parts of encapsulating your logic were hard?

- Encapsulating the rest of the code, as the only part of the code I attempted to encapsulate was the preview. Honestly, OOP is a tricky topic to understand

3. Is abstracting the book preview a good or bad idea? Why?

- It is a very good idea because, not only does it allow you to abstract your code and be able to reuse the code and encapsulate it allowing you to be able to hide code from a user.
 - It also allows you to shorten the code to avoid repetition and unnecessary long code.
-
